

Appl. No. 10/549,987

Abstract

A coenzyme Q₁₀ and ceramide-containing preliposome, and pharmaceutical preparations and cosmetics containing the same. The preliposome can further comprise other lipid components. A granular and lyophilized solid-preparation is produced by lyophilization or spray drying. Then, the coenzyme Q₁₀-containing proliposome is obtained by adding water in the said solid-preparation and shaking. Transdermal absorption of coenzyme is improved together with the effect of coenzyme Q₁₀ in cosmetics and the stability of coenzyme Q₁₀ and liposome, which facilitate the formulation of cosmetics.
